

```
import matplotlib.pyplot as plt

scenes = ['Static', 'Dynamic']
accuracy = [90, 65]

plt.figure()
plt.bar(scenes, accuracy)
plt.axhline(y=80, linestyle='--')
plt.title("GMM Accuracy in Different Scenes")
plt.ylabel("Accuracy (%)")
plt.show()

# Decision
for i in range(len(scenes)):
    if accuracy[i] >= 80:
        print(scenes[i], "✓ Meets requirement")
    else:
        print(scenes[i], "✗ Fails requirement")

print("\nFinal Decision: GMM alone is NOT suitable")
```

Static ✓ Meets requirement
Dynamic ✗ Fails requirement

Final Decision: GMM alone is NOT suitable
